Beschreibung

For Minutnik-elnk i need an quite complex frame to expose connectors but stay sustained.
Walking along the contour would be quite easy. An simple drawing on quadrille paper can be used.
The contour can be even drawn with kicad to match the PCB.

Turtle t(x,y)

t(10,0)

Not that complicated in SVG:

```
<g id="layer1">
  <path
    style=
"fill:#c200c2;fill-opacity:0;stroke:#c200c2;stroke-width:0.09999994;stroke-linecap:round;stroke-li
nejoin:round;stroke-opacity:1"
    d="m 0,0 l 0,-10 10,0 0,20"
    id="path630" />
</g>
```

How should the code look like.

```
#!/usr/bin/env python3
```

```
import sys
import time
```

```
class Turtle():
```

```
    def __init__( self, host ):
        self.host = host
```

```
    def u(self,n):
        print("up by ", n, "mm")
        return self
```

```
    def d(self, n):
        print("down by ", n, "mm")
        return self
```

```
    def l(self,n):
        print("left by ", n, "mm")
        return self
```

```
    def r(self, n):
        print("right by ", n, "mm")
        return self
```

```
turtle = Turtle("goo")
turtle.u(10).d(20) \
    .l(2) .r(22)
turtle.finish()
```

```
print("fin.")
```
